

Computerized Maintenance Management System RFP

Questions and Responses

Question

Response

Does the City intend on limiting software solutions to only web browser platforms or is it open to other options?

The City desires a browser-based solution, or one that allows remote access by field crews to identify work, retrieve work orders, view asset attribute data, and report daily work entries.

Exhibit A - Table 1: Item No. 13 references a Table 3 with implementation costs. We cannot find such a Table 3 mentioned elsewhere in the RFP. Please clarify.

The reference was a typo and should instead indicate "Table 2" as the source of the implementation costs. Table 2 was included immediately below Table 1.

Are demonstrations required to be in person, or will you allow for web-session demonstrations?

Demonstrations will be required to occur onsite at Pico Rivera City Hall.

Need some clarification with regards to GIS. GIS integration is listed as a minimum qualification and later it is noted that GIS has not been established for Public Works. If this is a future upgrade for Public Works, will you consider solutions for which this too will be a future upgrade?

GIS integration capability is a minimum requirement for the selected system. Potential candidate vendors which are selected for the "short-list" demonstrations must be able to show a functioning GIS component that is integrated.
